

FREE BICSI TRAINING

STI FIT Level 1 Training

FIT Level 1 Training

Firestop is widely recognized as a problematic issue for facilities engineering professionals. It is perhaps the most misapplied and misunderstood segment on Life-Safety in modern construction, especially with the constant changes made for voice and data cabling.

This comprehensive, competency-based course is designed to educate and train participants in the fundamentals needed to become a resident firestop specialist. The goal is to equip the participant with the knowledge and tools needed to return home as an accredited trainer, and to serve as a resident inspector in confirming whether firestop installations are code compliant or not.

FIT Level 1 Basic Training

This basic competency course is a 3-4 hour, in-service training and includes an exam. Certificates are issued for those who pass, which expire every two years. This course is excellent for designers, installers, code compliance officers and anyone seeking a basic understanding of firestopping.

- Competency-based program
- Certificates and wallet ID cards for those who pass the exam
- Offers renewable certification
- Is non-proprietary to specific brands

WHERE

Ohio/Michigan NECA
727 Lime City Road #100
Rossford, OH 43460

WHEN

January 16, 2018
Time: 8:00-12:00
